# 4W UV Banknote Fraud Detector

Try **Monster** - Buy **Monster** - Be **Monster**

# Specification

## Product Description

The T-Mech 4w Ultraviolet Banknote Fraud Detection Light is the perfect tool for detecting counterfeit money straight away, as well as checking the authenticity of credit, debit cards and ID cards.

The ultraviolet light displays fluorescent marks used on official documents like driving licenses and passports to protect you from illegal activities and to provide you with peace of mind.

It's so speedy and easy to use that you can incorporate it into your point of sale in retail stores, pubs, clubs, arcades, schools, community centres, restaurants or anywhere else where a payment and official document fraud detecting solution could save you time and hassle.

For full terms and conditions contact our Support department via the details on the Contact page.

# Specification

## Product Features

- 1) UV Bulb
- 2) Power Switch

# User Guide

## Operation Instructions

We recommend that users familiarise themselves with the security features of the note or documents they wish to analyse, in order to use the unit appropriately and effectively. Additionally, we also recommend the user to compare any suspicious bank notes against a good one for a better determination if whether it is legitimate or not.

### **Ultraviolet Detection**

Switch the unit on via the power switch. Place the bank note or document you wish to analyse on the surface, under the UV lamp.

The UV features contained in bank notes will fluoresce under the UV light. Using this principle, any bank note containing UV security features should fluoresce. GBP bank notes, other currencies, credit cards or other special documents contain UV security features that are difficult to reproduce by counterfeiters.

The UV reaction in a bank note can differ depending on the side that is analysed. For this reason, we recommend that under analysis both sides of the note or document are checked.

**Note:** Avoid operations the unit close to a strong natural or artificial light source. The effect of the UV light will be overpowered by that of the natural or artificial light source, therefore diminishing the fluorescence of the analysed bank note or document.

# Safety Advice

## Safe Working Practice

Please read through the safe working practice to ensure prevention of injury or damage to the device.

Do not operate the device in areas of high temperature or humidity as the machine may not function correctly.

Do not use this product in areas where it may be exposed to water or liquids.

Dust may accumulate on the UV lamps, reducing the luminescence. Use a damp soft cloth for cleaning. Do not use liquid or aerosol cleaners.

Unplug this product from the wall socket before cleaning or replacing the bulb.

Do not use the unit if the power cord is damaged or if the plug socket contact is loose. By not following these instructions many results in electrical shock, fire or other hazards.

When not using the unit for a long period of time, remove the power plug from the wall socket.
