9W UV Banknote Fraud Detector

Try **Monster** - Buy **Monster** - Be **Monster**

Specification

Product Description

The forgery checker has a few different ways of checking notes for authenticity. It has a built-in magnifying glass and a ruler, and a UV light of course. Using all of these methods, you can be absolutely sure of the authenticity of any money you handle. With counterfeiting on the rise, you need to protect your business by taking precautions to avoid fraudulent notes, otherwise it could only be a matter of time before you're the victim of illegal activity or customer errors. Performing checks will save you money, time and keep you on the right side of the law.

As well as banknotes, you can also check the validity of credit, debit and ID cards, plus official documents such as passports and driving licenses with this banknote fraud detection light.

Product Specifics

Dimensions:	185 x 120 x 130mm
Voltage:	220 V
Power Consumption:	16 W
Illumination:	200~800 lx
Ambient Humidity:	<85%
Ambient Temperature:	0-40°C

Monster Guarantee

If you wish to return a product in perfect working order, we provide a 14 day returns policy as long as the item is unopened and in a resalable condition. A 12 month warranty applies to all of our electrical products, we will cover labour, parts and delivery charges. Our policy is to try and fix the item before arranging an exchange or refund. Specification

Product Features

- 1) Magnetic Verification Window
- 2) UV Bulb
- 3) Micro-Printing Magnifier
- 4) UV/WM (Ultraviolet/Watermark) Switch
- 5) Magnetic Indicator
- 6) Magnetic Head

User Guide

Operation Instructions

We recommend that users familiarise themselves with the security features of the note or documents they wish to analyse, in order to use the unit appropriately and effectively. Additionally, we also recommend the user to compare any suspicious bank notes against a good one for a better determination if whether it is legitimate or not.

Note: The unit will only start to operate when a bank note is placed on the analysis surface.

Magnetic Ink Verification

When the unit is turned ON, the magnetic ink detection device is automatically activated and remains so whilst the unit is ON. Rub the area of the bank notes that contains the magnetic ink against the magnetic head. If there is magnetic ink present on the note the unit will emit a beeping sound and the green LED lights up. If no signal turns ON while analysing a note, this may be an indication that the note is not legitimate.

Ultraviolet Detection

Plug the unit into a power outlet and select UV detection on the UV/MW function switch. Place the bank note you wish to analyse on the surface, under the UV lamp.

The UV features contained in bank notes will fluoresce under the UV light. Using this principle, any bank note containing UV security features should fluoresce. GBP bank notes, other currencies, credit cards or other special documents contain UV security features that are difficult to be reproduced by counterfeiters.

The UV reaction in a bank note can differ depending on the side that is analysed. For this reason, we recommend that under analysis both sides of the note or document are checked.

User Guide

Operation Instructions

Watermark Verification

Select WM detection on the UV/WM function switch. Place the watermark contained on the bank note or document over the watermark verification window. Verify that the watermark is present in the note or document. The absence, displacement or low quality of the watermark may indicate that the note or document is not legitimate.

Micro Print Magnifier

Place the bank note or document under the magnifier window. This will allow the user to verify the micro print and fine lines present in some currencies and special documents.

Note: Avoid operating the unit close to a strong natural or artificial light source. The effect of the UV light will be overpowered by that of the natural or artificial light source, therefore diminishing the fluorescence of the analysed bank note or document.

Safety Advice

Safe Working Practice

Please read through the safe working practice to ensure prevention of injury or damage to the device.

Do not operate the device in areas of high temperature or humidity as the machine may not function correctly.

Do not use this product in areas where it may be exposed to water or liquids.

Dust may accumulate on the UV lamps, reducing the luminescence. Use a damp soft cloth for cleaning. Do not use liquid or aerosol cleaners.

Unplug this product from the wall socket before cleaning or replacing the bulb.

Do not use the unit if the power cord is damaged or if the plug socket contact is loose. By not following these instructions many results in electrical shock, fire or other hazards.

When not using the unit for a long period of time, remove the power plug from the wall socket.
