

8-TON LONG RAM JACK

OPERATION INSTRUCTIONS

- To raise, turn the release-valve slowly to the right
- To lower, turn the release-valve slowly to the left
- All pump parts are easily replaceable
- To add oil, fully collapse jack and add oil to increase oil level up to oil plug
- Use only hydraulic jack oil

CAUTION

- For lifting purpose only, not for supporting loads
- Promptly support load after jacking with appropriately rated safety stands or equivalent blocking
- Do not overload this jack beyond its rated capacity

2 TON ENGINE CRANE

CAUTION

- Failure to obey these warning may result in loss of load, damage to engine hoist, and/or engine hoist failure resulting in personal injury or property damage
- Do not overload engine hoist beyond rated capacity of each specified boom position. Overloading can cause damage to or failure of the hoist
- Always use hoist on hard level surface capable of sustaining the load. Use of hoist on other than hard level surfaces can result in hoist instability and possible loss of load
- Boom and load must be in lowest possible position before moving. Move load slowly and smoothly to avoid uncontrolled swinging and possible loss of load
