USER GUIDE

CONNECTING THE FRIDGE TO DC POWER SUPPLY

The fridge can be operated with 12 or 24V power supply.

For safety reasons, the refrigerator is equipped with an electronic system to prevent the polarity being reversed. This protects the refrigerator against reversed polarity when connecting to a battery and against short circuiting.

To protect the battery, the refrigerator switches off automatically if the voltage is insufficient (see table below).

	12V	24V
Cut-off voltage	10.4V	22.8V
Cut-in voltage	11.7V	24.2V

1. Connect the fridge to a plug socket which is fuse protected at 15A (12V) or 7.5A (24V)
2. Connect the red cable to the positive terminal of the battery.
3. Connect the black cable to the negative terminal of the battery.

PLEASE NOTE: Disconnect the fridge from the power supply before you charge your vehicle battery.
