Product Features

- 1) Hand Wheel
- 2) Sugar Cane Feeder
- 3) Tap Hole
- 4) Protective Cover for Gear Wheel
- 5) Tap
- 6) Cup Holder Tray
- 7) ON/OFF Switch
- 8) Press Rollers
- 9) Gearbox
- 10) Motor Belt
- 11) Motor

Safety Advice

Safe Working Practice

Please read through the safe working practice to ensure prevention of injury or damage to the device.

Personal Protective Equipment (PPE) must be worn by the operator of this machine.

Ensure the working area is well lit, clear and tidy, and keep unauthorised personnel at a safe distance.

Do not reach into the press or place any items other than sugar canes into the feeder during the pressing process.

Never remove or tamper with any of the wires; do not operate this equipment if the wires have been damaged.

Ensure the machine is placed on a solid, flat work surface to avoid vibration and decrease noise. Also ensure the operator of this machine is stood on a flat surface in order to feed with precision and safety.

Do not operate the device in areas of high temperature or humidity as the machine may not function correctly.

Never operate the machine in wet, damp or low visibility conditions.

Do not pour water on the electrical housing or near the vents.

The machine is designed to take the sugar canes from you. You should never attempt to push the canes excessively into the feeder, or attempt to place items in to help with the intake.

User Guide

Operation Instructions

- 1) As with all electrical devices, ensure the mains power supply and cable leading to the machine is not obstructed.
- 2) Ready the machine by turning the ON/OFF Switch to ON.
- 3) In the Cup Holder Tray, place a cup or similar object to catch the sugar cane which will be dispensed from the Tap above.
- 4) Ensure there is no obstruction around you when preparing to feed the sugar cane.
- 5) Place one sugar cane branch at a time into the feeder and feed firmly and continuously. Do not attempt to push the sugar cane in too quickly, as this may jam the machine. You will feel the machine take in the sugar cane, so continue to feed accordingly.
- 7) As you feed the sugar canes into the machine, the sugar cane will be pressed and the juice will pour from the tap. Naturally, ensure the container is appropriate for the amount of sugar cane juice you wish to press, to avoid overflow.
- 8) You can adjust the gap between two Press Rollers by using the Hand Wheel. For reference;

The smaller the gap, the more sugar cane juice per intake.
The wider the gap, the less sugar cane juice per intake.
- 9) Remember that when you feed a sugar cane into the Sugar Cane Feeder, it will be pressed and the remains of the sugar cane will emerge at the other side of the press, so be sure to take this from the machine when ready.

User Guide

Maintenance

NOTE: Before any maintenance is carried out, ensure the machine is unplugged.

For best and long-lasting results, it is recommended you clean the machine after every use.

From time to time, the gear wheel may require lubrication. This can be added when you feel the machine doesn't run to its maximum performance and the intake or pressing of sugar cane slows. As a general rule, it is recommended you lubricate the gear wheel several times a year.

To clean, use clean water. Take note that using cleaning agents on the press itself will require thorough rinsing to avoid contaminating the sugar cane juice.

Under no circumstance should you put your hand into the inlet feeder. Nor should you place any other material or consumable as this may damage the machine.

If the machine is damaged, do not attempt to make these repairs yourself. The repairs should be undertaken by a professional or qualified engineer or technician.

Troubleshooting

Resolution Guide

Please read through the guide below if you have any issues or faults with your device. The information covers and resolves the majority of frequently asked questions.

What do I do if...

Q: ... there are parts missing from my order?

A: If there appears to be any part missing from your package contact our Customer Support team via the details on the Contact Us page within 7 days of receipt.

Q: ... there is little to no juice coming from the tap?

A: This is probably due to the width of the gap between the rollers. Check the gap and adjust accordingly by turning the Hand Wheel. Remember: the smaller the gap, the more juice that will be pressed from the sugar cane.

Q: ... the inlet feeder isn't taking any sugar cane/the feeder is blocked?

A: This could be due to feeding too much sugar canes in at the same time. For best results, insert one at a time. If the feeder isn't taking sugar canes at all, there are several things which could be causing this:

- Check that the power is switched on.
- Use another mains power socket to check it is not the socket.
- Restart the machine.
- Lubricate the gear wheel.

For all other issues please contact our Customer Support department via the details on the Contact page.
