# Specification

## Product Description

Our Vanity Units and Sinks offer the perfect solution to a bathroom or cloakroom where you want to save space. You can choose from a variety of basins and solid oak vanity units, and create a stylish look for your home.

The vanity unit will come fully assembled, and your sink will arrive with a tap and waste unit.

We at Monster Group UK understand this is a new and exciting purchase, and although it is tempting to get stuck in please carefully read these instructions.

**Please refer to and read Safety Advice, Safe Working Practice to ensure prevention of injury or damage to the unit and sink before starting.**

## Monster Guarantee

If you wish to return a product in perfect working order, we provide a 30 day returns policy as long as the item is unopened and in a resalable condition.

A 12 month warranty applies to all of our electrical products; we will cover the cost of labour and parts. Our policy is to try and repair the item before arranging an exchange or refund.

If for any reason a part is missing please get in touch with us within 7 days on receipt of your order. You can contact our friendly and helpful Customer Support Team via email or call. For full terms and conditions contact our Support Department via the details on the Contact Us page.

# User Guide

## Assembly Instructions

It is important to check whether the current plumbing and pipes are long enough to reach the desired location for the new sink. It may be necessary to extend the hot and cold water pipes as well as the waste system, in order for the new sink to reach the new pipes before installation.

You will need to cut out your own holes in the unit for the pipes. When pipes are brought up through a unit, a 2-3mm allowance for expansion and contraction should be maintained around the pipe.

### Step 1: Removing the old basin

The first thing to do is to remove your old basin. Switch off the main water supply before you begin, and disconnect the water supply lines for the hot and cold valves and basin trap.

If your previous basin was part of a vanity unit, the unit may be secured to the wall by screws or caulking. Remove these fixings enough to loosen the unit and remove it from the wall.

### Step 2: Positioning the vanity unit

Measure out exactly where the new unit will be placed; make some markings with a pencil to act as a guide. This would be the time to drill the holes in the unit for the pipes. Ensure you have a good quality drill and proceed to drill the holes in the appropriate position. Make sure you sand down any rough edges. Position the unit, making sure the fitment is flat against the wall and is not obstructed in any way.

### Step 3: Fitting the vanity unit

Double check that all of the pipes align with the holes you have drilled before reconnecting them. If you want to make your unit extra secure, you can attach the unit to the wall (fittings not included).

## Assembly Instructions

### Step 4: Fitting the basin

Place the basin on top of the vanity unit. Firstly, fit the tap and waste kit to avoid any complications later. Once these are in, you can tightly bond the basin to the unit using a silicone sealant for a water tight fit.

### Step 5: Silicone sealant

Once you have chosen the appropriate silicone and way to apply it, cut a nice clean angle on your tube spout. Make sure you use a sharp blade to cut it, as a ragged edge will be reflected in your silicone. Do not cut the hole too large, as the silicone could spill out.

Before starting, make sure the surface is clean and smooth before application, and you have a clean glass of water nearby. You will need to use this water to smooth the silicone after application. You will also need a cloth handy to remove any excess silicone.

Ensure that a constant smooth bead of silicone comes out, but do not put too much silicone down as it will spread as you smooth it out.

### Step 6: Testing

Once you are satisfied with the positioning and fitting, it is time to turn the water supply back on. Allow the water to run through the tap for a few minutes. This will allow you to check that the water is flowing freely and that there are no leaks.

# Troubleshooting

## Resolution Guide

Please read through the guide below if you have any issues or faults with your device. The information covers and resolves the majority of frequently asked questions.

Q: There are parts missing from my order.

A: If there appears to be any part missing from your package contact our Customer Support team via the details on the Contact Us page within 7 days of receipt.

For all other issues please contact our Customer Support department via the details on the Contact page.

# Safety Advice

## Safe Working Practice

Please read through the safe working practice to ensure prevention of injury or damage to the device.

Personal Protective Equipment (PPE) must be worn when using a drill and applying the silicone sealant.

Make sure all loose clothing, hair and jewellery are tucked away when using a drill.

It is advised to seek professional help when fitting the sink and tap.
